

# Complete Data Protection & Disaster Recovery Solution

---

“We were looking at other solutions.  
Alike was the best with XenServer,  
and none of them had Alike’s  
compression abilities.

After the second backup  
we had 98% compression.”

Flexible and easy to use, Alike offers a suite of comprehensive, scalable, intuitive backup and disaster recovery solutions for XenServer, Hyper-V, and Windows-based physical systems.

### Protects When Others Can't

Get unique features that extend data protection to several areas not addressed by competing solutions. Use our exclusive Q-Hybrid technology to bypass expensive hypervisor snapshots and backup the VM directly using VSS snapshots instead. Q-Hybrid can also protect in-guest iSCSI drives.

### Cloud Storage

Backup to and restore from Amazon's S3 cloud. (DR edition only)

### File-Level Restore

While Alike protects VMs at a disk level, you can restore at a file-level to gain a high-performance, volume-level view of a protected VM within minutes.

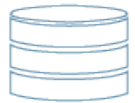

### End-to-End Encryption

Encrypt your data at every stage of the backup process.

### Scales on Demand

Alike's source-side data deduplication and processing can scale with your virtual infrastructure to meet any workload via flexible resource and scheduling options.

### Broad Storage Support

Use any CIFS-capable storage device.

## Alike's Streamlined Process Includes:

- Simple job scheduling - schedule backups for the interval that best suits your business.
- Simultaneous virtual machine backups - copy as many VMs as you want at one time.
- Protect an unlimited number of VMs per licensed host.
- Seamless VM protection with no service interruption.
- Perform backups with no impact on your production environment.
- Numerous technical innovations that help address the unique backup requirements for your business.

## Which edition is right for your environment?

### alike™ Standard

The innovative, high performance technical capabilities in Alike Standard were created with one goal in mind: make your backup and recovery processes as flexible, easy-to-use, and efficient as possible.

#### Global, Block-Level, Source-Side Deduplication

The best resource conservation available from industry-leading deduplication and compression capabilities.

#### Protects Against Data Corruption

Automatic data validation and self-healing technologies to avoid disruptive data corruption.

### alike™ DR

Alike DR was created to give users a complete, feature-rich disaster recovery solution with the added capacities of offsite vaulting and storage agnostic replication.

#### Offsite Vaulting

Efficiently maintain fully recoverable, deduplicated archives of your backups in an offsite location. Alike supports vaulting to the cloud, or any CIFS network share--with no hypervisor hosts required offsite.

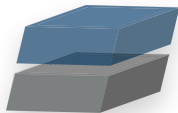

#### Enhanced VM Replication

Replicate running VMs to secondary environments in a single operation using flexible scheduling. Transfer only changed data with high performance and low bandwidth usage. Hypervisor and storage agnostic replication allows you to go between Citrix and Microsoft with ease.

#### Plus...

Every license of Alike DR includes the backup features and technologies found in Alike Standard.

## Protected Platforms

### Virtual Environments

Protect Citrix XenServer and Microsoft Hyper-V environments (or a combination of both) from a single installation of Alike.

### Physical Systems (P2V)

Rely on Alike to incorporate your Windows-based physical systems into your overall virtual disaster recovery plan, or serve as a stand-alone solution.

30-DAY  
TRIAL

Try Alike's features for virtual and physical environments: **FREE!**

Our no-obligation trial gives you the backup, replication, restoration, and vaulting power of Alike DR for a full month - plus full access to our expert Support team.

Reliable, intuitive, and ideal for setups of any size, trust Alike to become one with your environment.

### Implement in Minutes

To help you accelerate the implementation process, Alike features an easy-to-use installation wizard and requires only a small footprint. Alike is ready to use right out of the box.

### Flexible Deployment Options

You can deploy Alike inside your virtual infrastructure or on a physical machine--unlike competing solutions that offer only a VM appliance option. Alike's broad support for any CIFS compliant storage device gives you added flexibility.

### Minimize System Resources

Numerous ease-of-use features, such as Changed Block Tracking and Global Deduplication, enable nearly hands-free operation so your IT staff can focus their attention on other important business requirements. The Alike architecture enables you to conserve valuable storage, bandwidth, and memory resources.

### Manage Multiple Hypervisors as One

A single installation of Alike can be used to protect your business operations running in Citrix XenServer and Microsoft Hyper-V. The solution interoperates between the hypervisors enabling you to use one interface to seamlessly backup and restore in either (or both) XenServer and Hyper-V.

### Grow as Your Needs Grow

The scalable architecture and robust functionality means that your backup requirements will never outpace Alike's capabilities.
